ADVANTAGE:
Camcode Barcode Labels for CMMS

metalphoto®
Cross-section

aluminum layer
the rigid aluminum base will not peel, crack or delaminate

sealed image
black graphics are metallic silver particles that hold up to extreme heat and sunlight exposure

anodic layer
the glass-clear, sapphire-hard anodized layer resists chemicals, paint, abrasion and dirt

## CAMCODE®

WHY CHOOSE CAMCODE BARCODE LABELS FOR YOUR CMMS PROGRAM?

▶ **1D or 2D Bar Codes** - we will help you select the right barcode symbology for your system(s) (multiple code types can be employed for multi-system interoperability).

▶ **Customization** - we can add human-readable text or graphics to identify assets more easily.

▶ **Durability** - we offer several durable label materials including Metalphoto® anodized aluminum which is resistant to sunlight, abrasion, high temperatures and chemicals for 30+ years.

▶ **Attachment** - we will help you select the right attachment method(s) for your applications (adhesive, rivets, hang tags, and more).

▶ **Optional Support Services** ~ kitting (tags arrive organized, i.e. by P&ID location), installation (our team tags assets for you, delivers reconciled data file) and documentation (we can develop a label speciation for each asset type as a corporate standard).

ROI: REAL-WORLD GAINS BY USING CAMCODE CMMS TAGS

» Accurate cost of work tracking of individual physical assets, even if they move.

» Associate costs to a specific location by identifying fixed vs. rotating assets.

» Reduce mean-time-to-repair by accurately tracking maintenance stop/state times.

» Coordinate maintenance, operations and any other parties to communicate what assets they are working on, when and eliminate duplicate work.

» Eliminate tag replacement costs ~ with the right tag and attachment method, readability and replacement become a non-issue ("only tag once").

WHY USE BARCODES TO RUN YOUR CMMS PROGRAM AT ALL?

» Eliminate manual entry keystroke errors and reduce time-to-look-up through scanning.

» Utilize existing tablets and smartphones so you don't need to purchase additional hardware.

» Identify the correct asset every time, quickly, and track item-unique (i.e. serialized) information for each asset such as maintenance instructions, service history or location/status.
